Why go solar?

It's a great way to save money and help the environment.

Save money

You are generating a portion of your own electricity instead of buying it from the grid.

Energy independence

Batteries enable you to store your excess solar energy to use later.

Renewable energy buyback

Receive payment for feeding excess solar energy into the grid. Conditions apply. Visit our website for more information.

Clean energy

Solar power systems produce significantly less carbon emissions than fossil fuel.

Increase the value of your home

Solar power savings can make your home more attractive to potential buyers.

How does solar and battery storage work?

Your solar system is made up of panels, an inverter and an optional battery for storing your solar energy. Here's how it works:

Solar panels

When sunlight hits your solar panels, they begin to produce power.

Inverter

Your inverter converts the power from your solar panels into electricity that your home can use, and charges your battery.

Battery storage

Your battery stores your excess energy for when you need it.

Excess energy

Any electricity you aren't using is fed back into the grid for others to use. If you are eligible for renewable energy buyback this will show as a credit on your bill.

Meter

Your meter measures how much excess energy you're importing and exporting to the grid.

Cloud cover

When it's cloudy, instead of buying power from the grid, you can use power stored in your battery.

We keep your solar journey simple

Together with our delivery partner, we have the sales, system design and installation process all taken care of. With a dedicated warranty department and after sales support, Horizon Power Solar looks after all of your needs from start to finish.

1. Advice – Get in touch by completing our online form or calling 1300 726 606. By answering a few simple questions about how you use electricity, we'll recommend the solar energy system that suits your needs and budget. And with solar finance options available, requiring \$0 upfront, your renewable energy future could be closer than you think!**

2. Design – Once you have accepted the quote, it's time to get approval to connect to the network. We'll manage your application and any council approvals or site visits required to complete the design of your system.

3. Installation – Once your solar application has been approved, we'll arrange with a certified, local installer and electrical contractor to install the system at a time that suits you.

4. Start saving* – Start enjoying the savings that solar power brings to your home or business. If you are eligible for the renewable energy buyback, your credits will appear on your next bill.

Our quality assured product range

Solar panels

When choosing a solar panel it is important to consider both how it is manufactured and what materials are used.

We only use panels from Tier 1 manufacturers, and are cyclone-rated which means they are top quality and designed to withstand our region's extreme heat and weather conditions.

The brands we believe in

SUNPOWER®

Q CELLS

REC

Inverter excellence

An inverter converts the energy generated by your solar panels into electricity that can be used in your property. It ensures your system is safe, reliable and efficient.

The brands we believe in

Fronius

SMA

Quality battery storage

While a battery is an optional component of your solar energy system, they are the key to unlocking true energy independence. If you're not ready to invest in battery storage today, all of our solar panels can be fitted with a battery later.

The brand we believe in

sonnen

POWERWALL

* The potential savings mentioned in this brochure are based on Horizon Power's power consumption research and the current standard tariffs. Actual savings may differ depending on (among other things) how you use electricity and whether tariffs change over time.
**Please seek your own independent financial advice.

Why choose us?

For peace of mind

Horizon Power has been operating in regional WA for more than 60 years. We not only serve your community – we are part of it.

At any stage of your solar experience we're here to help, and like you, we're local.

Our trusted partner

We've partnered with solar experts, Energy Matters, to deliver premium solar products at competitive prices to regional WA.

Energy Matters is a Clean Energy Council approved retailer with over 10 years' experience installing over 23,000 residential solar energy systems.

Expert advice

Our experts will examine your daily and peak energy usage, bill history, roof layout and house orientation to design a system that's suited to your needs and budget.

We can also advise how you can benefit from battery storage, to maximise your investment now and into the future.
